

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-67 (Canceled).

68. (Currently amended) An original watch outward design creating method in a design creating system having a consumer terminal and maker-side host computer connected with the consumer terminal through an information communication network, the method comprising steps of:

providing in the maker-side host computer, a watch parts digital information indicating watch constituent parts and a design software to the consumer terminal;

receiving in the consumer terminal, the watch parts digital information indicating watch constituent parts and the design software from the maker-side host computer;

displaying in the consumer terminal, the watch constituent parts on a display of the consumer terminal by using the design software;

selecting in the consumer terminal, desired watch constituent parts from the watch constituent parts in accordance with an input from the consumer terminal by using the design software;

creating in the consumer terminal, an original watch outward design information by using the design software to combine the watch parts digital information related to the desired watch constituent parts;

transmitting from the consumer terminal, the original watch outward design information to the maker-side host computer; and

receiving in the maker-side host computer, the original watch outward design information.

69. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

acquiring in the consumer terminal, production status of a watch according to the original watch design information.

70. (Currently amended) The original watch design creating method of claim 68, further comprising a step of,

confirming in the maker-side host computer, a color tone of ~~the~~ an original design watch according to the original watch design information.

71. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

displaying in layers in the consumer terminal, a completed figure, pattern groups of watch constituent parts, and designation of parts, on a screen of the consumer terminal by using the design software.

72. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

sequentially and selectively displaying on a screen of the consumer terminal from a large group to a small group of the watch constituent parts by using the design software.

73. (Currently amended) The original watch design creating method of claim 68, further comprising a step of,

displaying on a screen of the consumer terminal an enlarged view of an original design watch according to the original design watch design information by using the design software.

74. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

displaying in the consumer terminal, a plurality of competed watches to be compared with one another on the same screen of the consumer terminal by using the design software.

75. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

selecting location, number, length, font and color of a dial-plate message on a screen of the consumer terminal by using the design software.

76. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

displaying a plurality of sample patterns on the same screen of the consumer terminal by using the design software.

77. (Previously presented) The original watch design creating method of claim 68, wherein the original watch design information includes dial-plate information, hands information, watch case information, color information, watchband information, buckle information, time indicator information or message information.

78. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

inputting in the consumer terminal, message information independently created by the consumer,

and wherein the original watch design information includes the message information.

79. (Previously presented) The original watch design creating method of claim 68, further comprising a step of,

inputting in the consumer terminal, watch design information independently created by the consumer,

and wherein the original watch design information includes the watch design information.

80. (Previously presented) The original watch design creating method of claim 68, wherein the original watch design information includes material information of the watch constituent parts.

81. (Previously presented) The original watch design creating method of claim 68, wherein the original watch design information includes mechanical function information of the watch constituent parts.
